

Invisible fixation system

Technical datas:

System

Softline®

*Unbreakable
& invisible fixation*

This revolutionary fixation system enables the planks to be fitted without any visible screw, improving both the resistance of the structure (no more weak points in the plank or sheared screw) and giving a clean, aesthetically pleasing appearance to the installation.

This fixation system, designed in an extremely tough composite material guarantees long lasting durability. This method of fixation (see illustration) allows the free circulation of air and permits movement between the planks preventing deterioration of the wood itself.

The *Softline*® system combines aesthetics with reliability.

The advantages of the fixation:

- Allows fixing to supports without visible screw or nails.
- Eliminates the need for pre-drilling and countersinking.
- Fixings manufactured from tough composite material guaranteeing a high quality system.
- Flexibility in shrinkage and/or expansion allows simple re-positioning.
- Allows lateral movement between planking without any deterioration of the wood.
- Allows the planking to be isolated from the batten.
- Provides a guarantee of long-lasting durability.
- Shortens the installation time.
- Allows even jointing between planks.
- Ensures free circulation of air.
- Improves the general appearance of the overall installation.
- Fixing method also allows vertical installation of the planks.
- Possibility of removing and replacing planks.
